

Dear Congressional Representative--

As a voting citizen and XM Satellite Radio subscriber, I respectfully urge the FCC to reject the National Association of Broadcasters' petition 04-160.

Subscribers to Satellite Radio services benefit greatly from all content offered, including local traffic and weather information. Offering such content better serves the listener by providing more quality choices.

And, because Satellite Radio does not use public domain frequencies, the NAB has no legitimacy in their claim to Satellite Radio's content.

Again, I urge you as my representative, please reject 04-160's attempt to restrict Satellite Radio's content.

Thank you,  
Michael Attebury
